The LAW

▶ **SUMMARY:** Sixty-five percent of voters approved Proposition 200 on November 5, 1996, which included several provisions regarding prison reform and one specific to the use of medical marijuana. The law took effect on December 6, 1996. It mandates alternative sentencing for non-violent drug offenders, and seeks to establish legal protections for seriously ill patients by allowing doctors to "prescribe" schedule I controlled substances such as marijuana. However, because federal law ultimately forbids physicians from prescribing such drugs, this statute does not adequately protect patients from state-level criminal penalties, as do similar state laws that only require patients to possess a physician's "recommendation" that medical marijuana therapy may be beneficial. Not surprisingly, the attorney general's office reports that state physicians are not advocating medical marijuana therapy to their patients under the law. ▶ **So, while a majority of Arizona voters have passed ballot measures enacting legislation to allow the use of medical marijuana, the laws do not adequately protect patients nor Doctors who would prescribe it.** The legislation as it is currently enacted requires Doctors to write a prescription for medical marijuana to their patients. Since marijuana is still classified as a Schedule 1 drug, the FDA effectively forbids Doctors from doing so. Subsequent ballot initiatives to correct the legislation have thus far failed. BOOKS on Medical Cannabis (marijuana) and related

▶ **Medical Dictionary on Cannabis \$48.95 - CANNABIS A Bibliography, Medical Dictionary, and Annotated Research Guide to Internet References (marijuana) A Bibliography, Medical Dictionary, and Annotated Research Guide to Internet References on Cannabis.** Pages : 268, Price : \$48.95(USD) ISBN : 0597835675 Published : 2003

Synopsis: In March 2001, the National Institutes of Health issued the following warning: "The number of Web sites offering health-related resources grows every day. Many sites provide valuable information, while others may have information that is unreliable or misleading." Furthermore, because of the rapid increase in Internet-

based information, many hours can be wasted searching, selecting, and printing. Since only the smallest fraction of information dealing with cannabis is indexed in search engines, such as www.google.com or others, a non-systematic approach to Internet research can be not only time consuming, but also incomplete. This book was created for medical professionals, students, and members of the general public who want to conduct medical research using the most advanced tools available and spending the least amount of time doing so.

Description: This is a 3-in-1 reference book. It gives a complete medical dictionary covering hundreds of terms and expressions relating to cannabis. It also gives extensive lists of bibliographic citations. Finally, it provides information to users on how to update their knowledge using various Internet resources. The book is designed for physicians, medical students preparing for Board examinations, medical researchers, and patients who want to become familiar with research dedicated to cannabis. If your time is valuable, this book is for you. First, you will not waste time searching the Internet while missing a lot of relevant information. Second, the book also saves you time indexing and defining entries. Finally, you will not waste time and money printing hundreds of web pages.

Excerpt (Introduction). In addition to offering a structured and comprehensive bibliography, this medical reference on cannabis will quickly direct you to resources and reliable information on the Internet, from the essentials to the most advanced areas of research. Public, academic, government, and peer-reviewed research studies are emphasized. Various abstracts are reproduced to give you some of the latest official information available to date. Abundant guidance is given on how to obtain free-of-charge primary research results via the Internet. E-book and electronic versions of this book are fully interactive with the Internet. For readers unfamiliar with the Internet, detailed instructions are offered on how to access electronic resources. For readers unfamiliar with medical terminology, a comprehensive glossary is provided. For readers without access to Internet resources, a directory of medical libraries, that have or can locate references cited here, is given. We hope these resources will prove useful to the widest possible audience seeking information on cannabis. visit: http://www.icongrouponline.com/health/Cannabis_ph.html
